### Abstract

In continuation of his study of Semigraphs, Sampathkumar generalized the concept of Digraphs to Disemigraphs giving new direction of investigation to the subject. One important topic for the graph theorists in Digraph is the study of Tournament which is found missing in Disemigraphs. In this small paper, we attempt to fill this gap by modifying the definition of Tournament in conformation with Disemigraph structure and derive some of its characterizations.

-----  
Key Words : *Semigraphs, Directed semigraphs, Tournament.*

2000 AMS Subject Classification : 05C20.
