Abstract

The aim of the present research paper is to study some new transformations here we obtain three transformations, with the help of [4, p. 4125]. Inayat Hussain, involving \overline{H} -function. The transformations established here are quite general in nature from which we can derive a large number of known and new transformation by specializing the parameters suitably of the various Function involved transformation.

Key Words : \overline{H} -function ${}_4F_3(1)$ into ${}_3F_1(1)$, Transformation.
