Abstract

In this paper we have introduced a new class $J_H(\alpha, \beta, \gamma, \psi)$ of Harmonic univalent functions in the unit disc $E = \{z; |z| < 1\}$ but with some missing coefficients. We study various properties such as coefficient estimates, extreme points, convolution and their related results.

Key Words : *Univalent functions, Harmonic functions,, Starlike functions and Convolution.*

AMS Subject Classification : 30C45, 30C50.
